Presentations

[◀ NEWER](#)[OLDER ▶](#)**CULTURE & METHODS**

Developing a Digital Product: What It Is and How

Roberto Mameli discusses the implications and what it takes to build a successful digital product in the digital economy and how to leverage the network effect.

ROBERTO MAMELI ON OCT 31, 2019

LIKE

**CULTURE & METHODS**

How to Find Purpose in Work

Katharina Probst discusses autonomy, mastery, and purpose which motivate people, diving deeper into purpose.

KATHARINA PROBST ON OCT 23, 2019

LIKE

**AI, ML & DATA ENGINEERING**

Big Data's Ethical Drought: The Thirst for More Data Has Led to a Lapse in Ethics and Privacy

Katharine Jarmul provides examples of data (mis)use and asking how we can work with data without violating the trust and privacy of users, producing an ethical product?

KATHARINE JARMUL ON OCT 17, 2019

LIKE

**ARCHITECTURE & DESIGN**

Bayesian Optimization of Gaussian Processes with Applications to Performance Tuning

Ramki Ramakrishna discusses using Bayesian optimization of Gaussian processes to optimize the performance of a microservices architecture.

**CULTURE & METHODS**

Highlighting Silicon Valley Strategies for Improving Engineering Velocity, Efficiency, and Quality

David Mercurio shares personal insights and experiences about cultural practices that one can apply to help improve the effectiveness of an engineering organization.

**DEVELOPMENT**

Your Program as a Transpiler: Applying Compiler Design to Everyday Programming

Edoardo Vacchi discusses opportunities to apply programming language development techniques learned working with Drools and jBPM to a broader context.

**AI, ML & DATA ENGINEERING**

A Look at the Methods to Detect and Try to Remove Bias in Machine Learning Models

Thierry Silbermann explores some examples where machine learning fails and/or is making a negative impact, looking at some of the tools available today to fix the model.

**ARCHITECTURE & DESIGN**

Software Supply Chain Management with Grafeas and Kritis

Aysulu Greenberg discusses the goals for Grafeas and Kritis used to secure a company's software supply chain, and concludes with the details of current and future development.

A Venn diagram consisting of three nested shapes: a large black-outlined circle at the bottom, a smaller black-outlined square in the middle, and a red-outlined oval at the bottom left. The text is distributed as follows: 'What You Know' is in the top-right quadrant of the square; 'What You Know You Don't Know' is in the middle-right quadrant of the square; and 'What You Don't Know You Don't Know' is in the red-outlined oval.

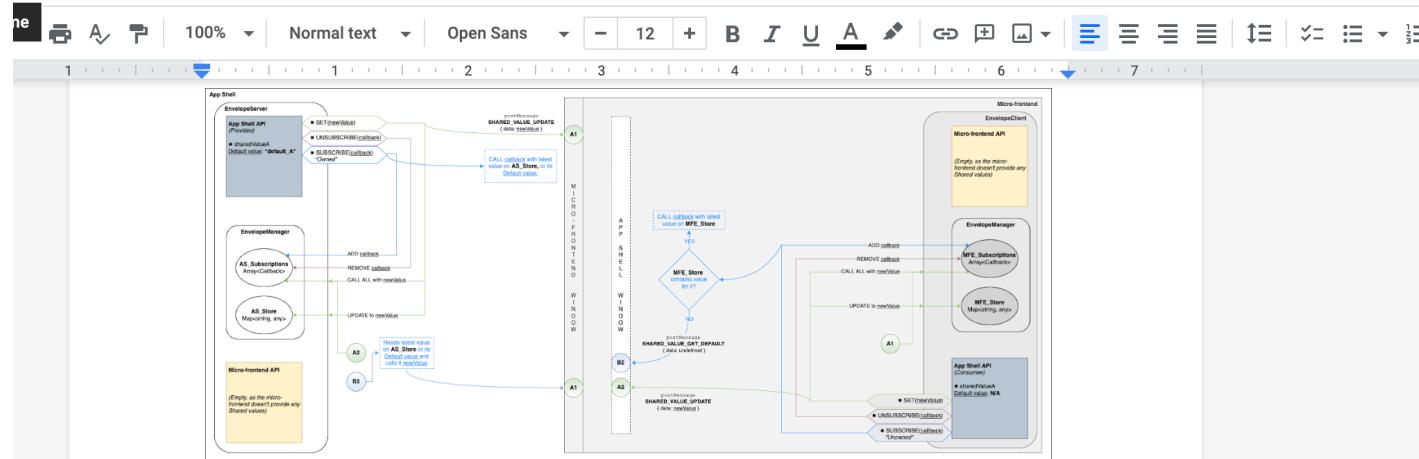

Image 1 - Simplified diagram where the App Shell provides a single Shared value and the micro-frontend simply consumes it.

The complete flow of Shared values can be found on the next image. Notice the symmetry. This is a visual clue for the way that both App Shells and micro-frontends deal with Shared values.

The whole point of this invention is to provide a mechanism that will always keep values in sync, independent if they're owned by App Shells or micro-frontends, so it's natural that they both share the same behavior and structures, as they must be equally capable to both Provide and Consume Shared values to/from their counterparts.

As with the simplified image above, a good way to start reading is looking at the flat hexagons containing the names of the methods (`SET`, `SUBSCRIBE`, and `UNSUBSCRIBE`).

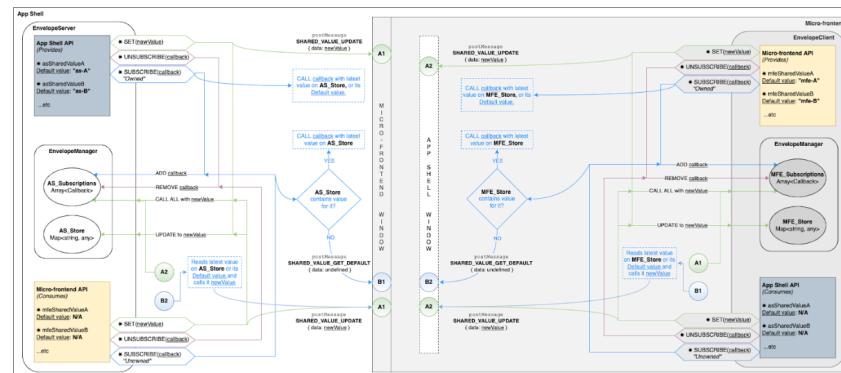

Image 2 - Complete diagram where both App Shell and micro-frontend Provide and
