

Open source software development: a professional view

Eder Ignatowicz
Principal Software Engineer
Tech Lead@Red Hat

What do I do
for a living?

I'm an open source developer at
Red Hat Business Automation
(**Drools/jBPM/Kogito**)
tooling teams.

Kogito

Kogito is the next generation of business automation platforms focused on cloud-native development, deployment, and execution. Kogito is composed of the battle-tested projects of the KIE group: Drools, jBPM, and OptaPlanner.

[READ MORE →](#)

Drools is a business rule management system with a forward-chaining and backward-chaining inference based rules engine, allowing fast and reliable evaluation of business rules and complex event processing.

[READ MORE →](#)

jBPM is a flexible Business Process Management suite allowing you to model your business goals by describing the steps that need to be executed to achieve those goals.

[READ MORE →](#)

OptaPlanner is a constraint solver that optimizes use cases such as employee rostering, vehicle routing, task assignment and cloud optimization.

CULTURE & METHOD

Developing a Digital Product: What It Is and How

Roberto Mammeli discusses the implications and what it takes to build a successful digital product in the digital economy and how to leverage the network effect.

ROBERTO MAMMELI ON OCT 31, 2019

1:05

CULTURE & METHOD

How to Find Purpose in Work

Katharina Probst discusses autonomy, mastery, and purpose which motivate people, diving deeper into purpose.

KATHARINA PROBST ON OCT 25, 2019

1:16

AI, ML & DATA ENGINEERING

Big Data's Ethical Drought: The Thirst for More Data Has Led to a Lapse in Ethics and Privacy

Katherine Jarmul provides examples of data (mis)use and asking how we can work with data without violating the trust and privacy of users, producing an ethical product?

KATHERINE JARMUL ON OCT 12, 2019

1:07

ARCHITECTURE & DESIGN

Bayesian Optimization of Gaussian Processes with Applications to Performance Tuning

Ramki Ramakrishna discusses using Bayesian optimization of Gaussian processes to optimize the performance of a microservices architecture.

RAMKI RAMAKRISHNA ON OCT 11, 2019

1:07

CULTURE & METHOD

Highlighting Silicon Valley Strategies for Improving Engineering Velocity, Efficiency, and Quality

David Moreland shares personal insights and experiences about cultural practices that one can apply to help improve the effectiveness of an engineering organization.

DEVELOPMENT

Your Program as a Transpiler: Applying Compiler Design to Everyday Programming

Edouardo Viechi discusses opportunities to apply programming language development techniques learned working with Erlang and BPM to a broader context.

AI, ML & DATA ENGINEERING

A Look at the Methods to Detect and Try to Remove Bias in Machine Learning Models

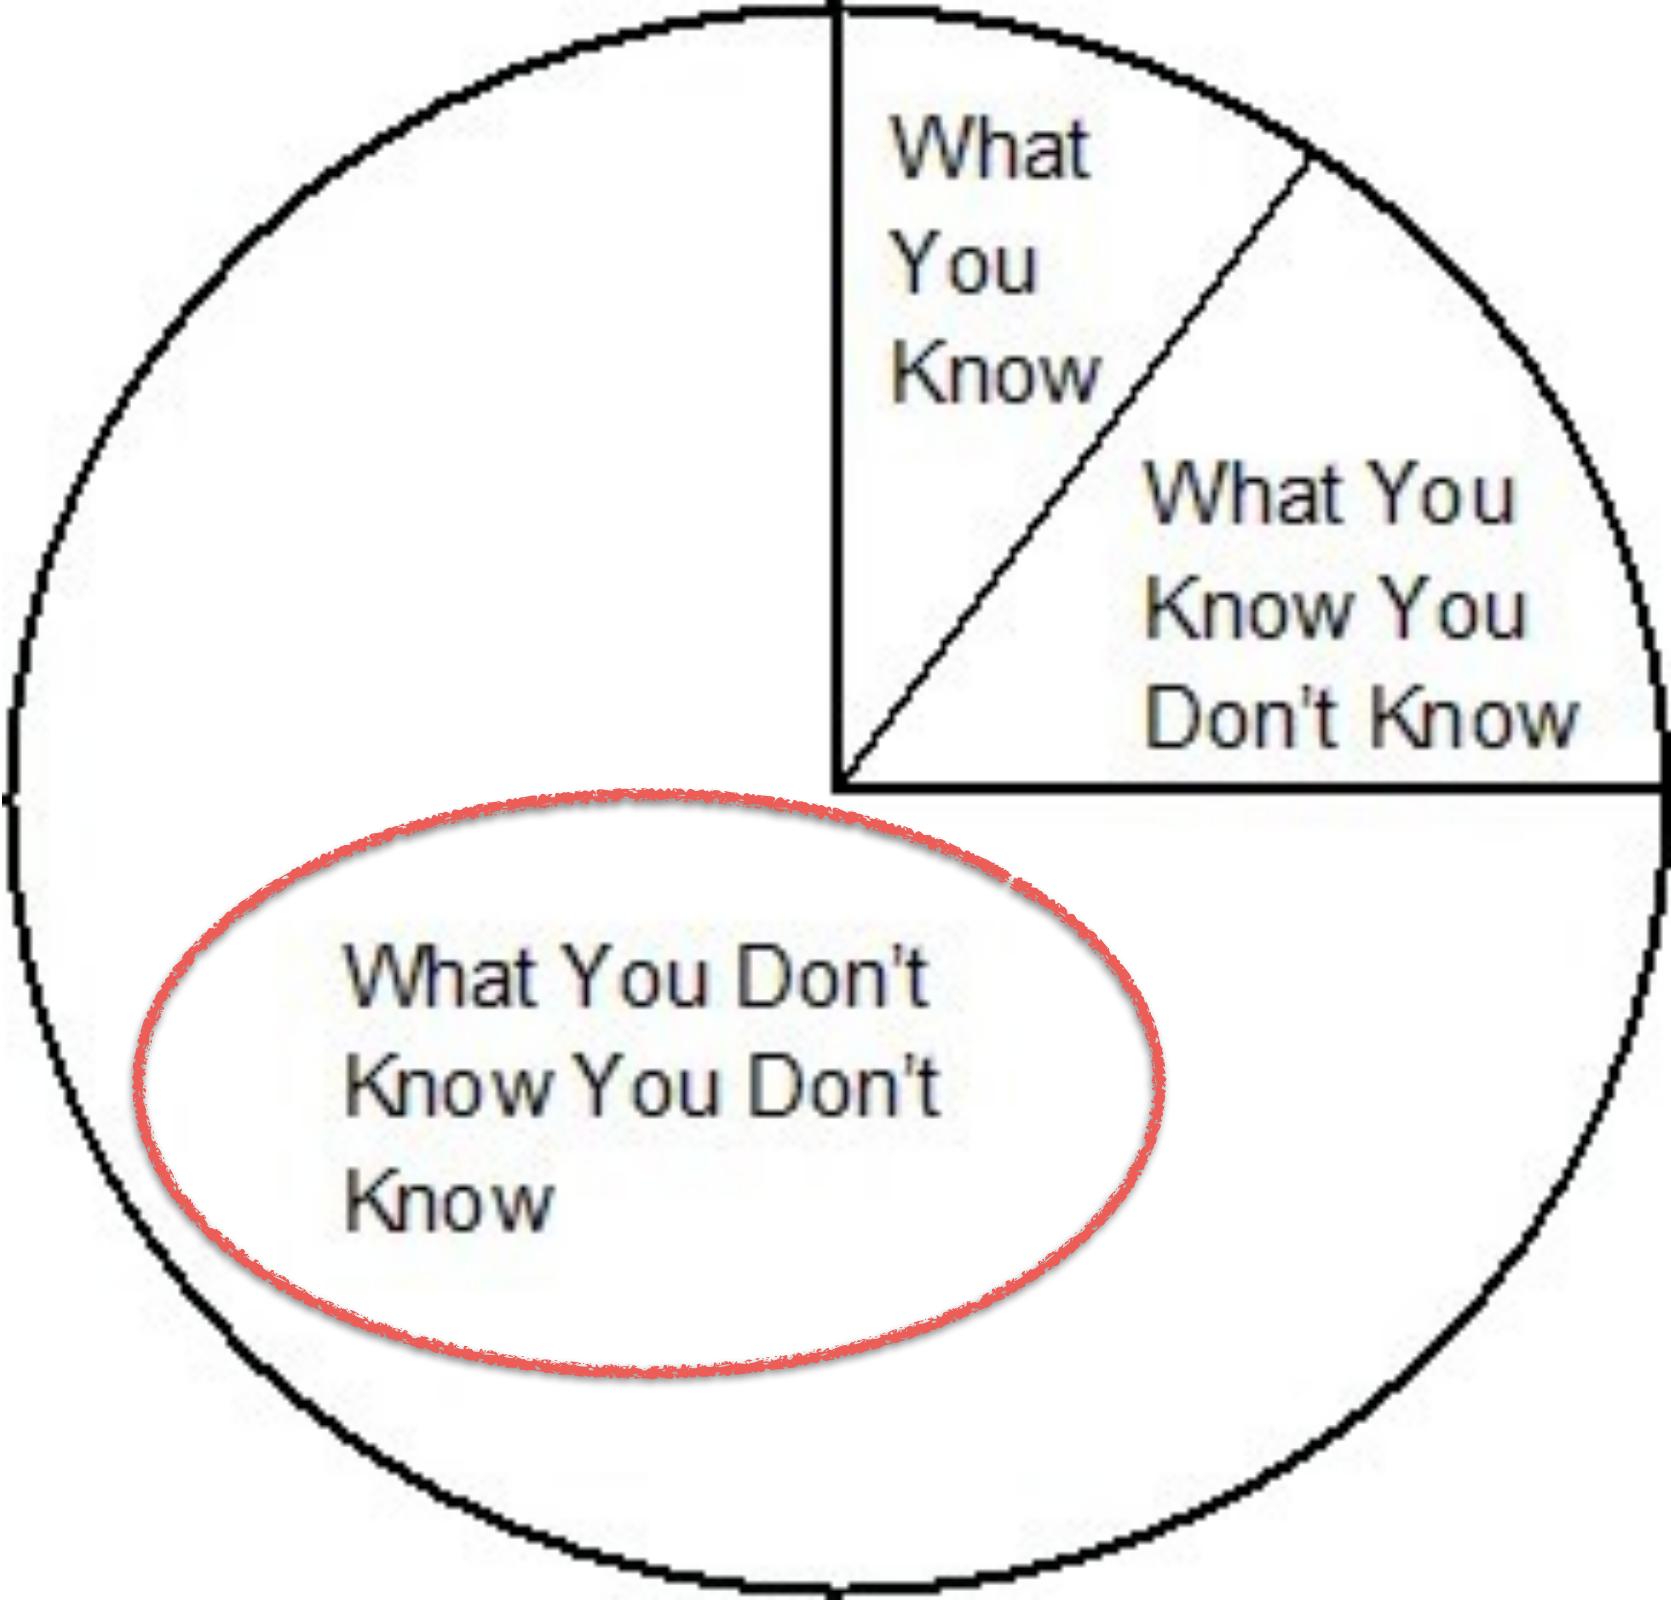

Thierry Silbermann explores some examples where machine learning fails and/or is making a negative impact, looking at some of the tools available today to fix the model.

ARCHITECTURE & DESIGN

Software Supply Chain Management with Grafeas and Kritis

Yaeli Greenberg discusses the goals for Grafeas and Kritis used to secure a company's software supply chain, and concludes with the details of current and future development.

with bleeding edge
technology?

Get involved in Open Source as
early as possible.

Step 1: Find your community

Overwhelmed? Please see the CNCF Trail Map. That and the interactive landscape are at <https://landscape.cncf.io>

<https://landscape.cncf.io>

The screenshot shows the official website for Kogito (kogito.kie.org). The page features a large, stylized background graphic composed of interlocking blue and orange geometric shapes, resembling a complex puzzle or a network. Overlaid on this graphic is the text "Kogito ergo automate" in a large, white, sans-serif font. Below this main title is a subtitle: "CLOUD-NATIVE BUSINESS AUTOMATION FOR BUILDING INTELLIGENT APPLICATIONS, BACKED BY BATTLE-TESTED CAPABILITIES." At the bottom of the main content area are two prominent orange buttons with white text: "GET STARTED" on the left and "LATEST UPDATES (16.0.FINAL)" on the right. The top navigation bar includes links for "GET STARTED", "GUIDES", "COMMUNITY", "SCHEDULE", "BLOG", "TRUSTY AI", and "GITHUB". The "GITHUB" link is highlighted with a darker orange background. The Kogito logo, which is a small blue icon of a bear's head wearing a crown, is located to the left of the main title.

Getting help

DOCUMENTATION

If you have any questions, make sure to take a look at the [Kogito documentation](#).

EXAMPLES

Kogito can be used in many ways, so to help you get started, we provide a wide range of examples demonstrating from simple hello world to more advanced use cases using DMN, BPMN, KNative, Serverless Workflow and more. Head to [Kogito examples](#) repository in GitHub and start exploring. The team is constantly updating this repository with new and exciting features as they are added to Kogito.

DISCUSSIONS AND MAILING LIST

You can also ask questions on our mailing list. Join the Google group via email kogito-development+subscribe@googlegroups.com or by visiting the [Google Groups page](#).

BLOG

Follow helpful articles and posts on [Kie Blog](#) presenting interesting use-cases and examples of Kogito in action.

CHAT

Join our community chat by joining the #kogito channel on <https://kie.zulipchat.com/>. Inside our KIE organization you will find various streams where you can follow any of the topic discussions, create your own topic to ask a question or even help out others. Since most of the developers use this for their day to day discussions as well, you will find a lot of experts there, and a ton of information.

Daniele Zonca

@Tyler Thraillkill, what do you mean with recompilation time? are you running in dev mode?

11:14 AM

kogito Tyler Thraillkill

@Daniele Zonca yes, running in dev mode. Start the app in dev mode, it starts, then on first request, it tries to recompile and it's taking several minutes now, whereas before it was 30 seconds to a minute to recompile. Not sure if it's related to the above change or just due to switching to L6.0.

1:27 PM

kogito Lambda invocation Time

Tyler Thraillkill

Haven't been able to deploy 1.6.0 to aws yet, been too busy with other stuff. I should be able to get to that next week though. I'll update with what the improvements look like then.

The Kogito Community <<https://kogito.kie.org/community/>> – Version 1.6.0

Kogito

Welcome

1. Kogito business automation

Kogito is a cloud-native business automation technology for building cloud-ready business applications. The name *Kogito* derives from the Latin “*Cogito*”, as in “*Cogito, ergo sum*” (“I think, therefore I am”), and is pronounced [‘ko:.dʒi.to] (KO-jee-to). The letter *K* refers to Kubernetes, the base for OpenShift as the target cloud platform for Kogito, and to the Knowledge Is Everything (KIE) open source business automation project from which Kogito originates.

Kogito is optimized for a hybrid cloud environment and adapts to your domain and tooling needs. The core objective of Kogito is to help you mold a set of business processes and decisions into your own domain-specific cloud-native set of services.

the best ones!**

2.3 Ask/Reply questions on public channel
(Help people)

2.4 Learn how to build and run the development environment

☰ README.md

Releases

In Kogito Tooling [releases page](#) you will find extensions and released tooling packages.

Build from source

1. Check out the source:

```
git clone git@github.com:kiegroup/kogito-tooling.git
```

If you don't have a GitHub account use this command instead:

```
git clone https://github.com/kiegroup/kogito-tooling.git
```

2. Build with Yarn:

```
cd kogito-tooling
yarn run init

#prod
yarn run build:prod

# dev
yarn run build # skips integration tests and production packing
yarn run build:fast # skips lint and unit tests
```

NOTE: It's necessary to have the Git tags fetched when building with `build:prod`.

Final artifacts will be on `packages/*/dist` directories.

**2.5 Start to learn the codebase:
Read and debug source code**

2.6 Start to watch/read small PR's merged and try to mimic/reimplement them locally

KOGITO-4892: Fix the separator replace code #477

ederlign merged 1 commit into [kiegroup:master](#) from [caponetto:KOGITO-4892-master](#) 26 days ago

[Conversation 6](#)[Commits 1](#)[Checks 18](#)[Files changed 1](#)

caponetto commented 28 days ago • edited

Member

This PR fixes a bug where custom tasks cannot be found from a WID in a BPMN file (VS Code - Windows OS only).

See [KOGITO-4892](#)

This code only replaces the first separator:

```
"test/foo/bar/see/the/separators".replace("/", "\\\\")
```

See:

The screenshot shows a Node.js REPL interface. On the left, there's a dropdown menu set to "Node.js". Below it, the command `const test = "test/foo/bar/see/the/separators"; console.log(test.replace("/", "\\\\")); console.log(test.replace(/\//g, "\\\\"));` is typed into the input field. To the right, the output shows two lines of text: `test\\foo\\bar\\see\\the\\separators` and `test\\foo\\bar\\see\\the\\separators`. A hint at the bottom says "Hint: hit control+c anytime to enter REPL." followed by a cursor icon.

According to the documentation:

String.prototype.replace()

The `replace()` method returns a new string with some or all matches of a `pattern` replaced by a `replacement`. The `pattern` can be a string or a `RegExp`, and the `replacement` can be a string or a function to be called for each match. If `pattern` is a string, only the first occurrence will be replaced.

Thus, we need to use a regex to make it work properly.

Step 3: Start to contribute

3.1 Help with documentation

3.2 Help new users

3.3 Keep reading source code (PR's etc)

3.4 Do your first “code” contribution

And suddenly..

Red Hat

Google facebook ...

“Hi, I see your contributions to {X} project and love it!
Do you wanna talk about an opportunity at
{Cool_Tech_Company}? ”

Why?

1. If you already contribute to Open Source in your free time, you probably love open source culture and the project;
2. You are already familiar with the codebase;
3. I already know how you code (I can check your contributions code);
4. You are probably familiar with the community;

And what this means to you?

Work developing
bleeding edge technology

Real world experience
from your home

Access to become a full time
open source developer in
any project/company

It's not easy

But it's possible

There are really fewer people
that does this then you can
imagine.

Reverse the recruit process

Choose the companies/projects
that you want to work for

Code fun stuff!

Thanks!

Next week?

Deep dive on
Cloud-native business
automation with Kogito for
building open source intelligent
applications

Kogito

Kogito is the next generation of business automation platforms focused on cloud-native development, deployment, and execution. Kogito is composed of the battle-tested projects of the KIE group: Drools, jBPM, and OptaPlanner.

[READ MORE →](#)

Drools

Drools is a business rule management system with a forward-chaining and backward-chaining inference based rules engine, allowing fast and reliable evaluation of business rules and complex event processing.

[READ MORE →](#)

jBPM

jBPM is a flexible Business Process Management suite allowing you to model your business goals by describing the steps that need to be executed to achieve those goals.

[READ MORE →](#)

OptaPlanner

OptaPlanner is a constraint solver that optimizes use cases such as employee rostering, vehicle routing, task assignment and cloud optimization.
